SUPERVISED CONTROL MODULE

DESCRIPTION

The Supervised Control Module, P/N 55-042 & 55-047, provides a means to switch an external power supply to notification appliances or release solenoids used for sprinkler operation, or to activate Fike's Masterbox Interface module, P/N 10-2413, which is used on a Local Energy Type Auxiliary Fire Alarm System. The module is capable of Class A or Class B wiring. The device will monitor the wiring (while external power is not switched to the auxiliary devices) to the connected device for open and short circuits via an end-of-line resistor (Class B only). The module will monitor the external power input for loss of power (DC voltage supplies only). The isolator version of the module, P/N 55-047, provides complete short-circuit isolation for installations requiring NFPA, Class X wiring.

The module is compatible with Fike's CyberCat® and Cheetah® Xi intelligent control panels. Its operating parameters are configured using the panel's programming software and stored within the module's non-volatile RAM. This onboard intelligence allows each module to communicate its status directly to other devices connected to the Signaling Line Circuit (SLC). This peer-to-peer digital protocol results in less information that must be sent between the module and the host control panel, resulting in faster, more reliable communication.
